10-STEP BATHROOM RENOVATION PLANNING CHECKLIST

Plan your renovation with confidence using a simple checklist covering budgeting, waterproofing, plumbing, ventilation, installation stages, and final inspections.

☐ **Step 1: Budgeting & Contingency Planning**

Establish a clear budget including a 10–15% contingency fund for unforeseen plumbing or structural repairs behind existing walls/floors.

☐ **Step 2: Design Layout & Fixture Selection**

Finalize layout dimensions for basin, toilet, bath/shower, and towel rails. Choose sanitaryware, brassware, tiles, and storage suitable for room size.

☐ **Step 3: Plumbing & Pipework Assessment**

Evaluate existing water pressure and waste line locations. Determine whether pipework needs rerouting before purchasing specific valves or taps.

☐ **Step 4: Ventilation & Heating Strategy**

Plan efficient inline or wall extraction to prevent condensation and mould. Decide between heated towel radiators or electric underfloor heating.

☐ **Step 5: Electrical & Lighting Safety (IP Ratings)**

Ensure electrical plans comply with UK building standards (Part P). Verify IP-rated lighting zones, shaver sockets, and LED mirror connections.

☐ **Step 6: Strip Out & Subfloor Preparation**

Isolate utilities and remove old tiles/fixtures. Inspect floor joists and walls for damp, levelling or reinforcing surfaces as needed.

☐ **Step 7: Waterproofing & Tanking System**

Apply tanking kit / waterproof liquid membrane and sealing tape to high-moisture shower zones and bath enclosures to ensure leak-free walls.

☐ **Step 8: Tiling, Panelling & Grouting**

Fit tile backer boards, lay wall/floor tiles with flexible waterproof adhesive, grout thoroughly, and apply mold-resistant silicone sealant.

☐ **Step 9: Second-Fix Installation**

Install vanity units, toilet, shower enclosure, taps, and radiator. Connect waste traps and test water flow and drainage thoroughly.

☐ **Step 10: Final Inspections & Quality Check**

Conduct full pressure leak checks, test extractor fan airflow, verify heating function, inspect all silicone beads, and perform final cleanup.
