SMALL BATHROOM FIXTURE BUYING GUIDE

Compare toilets, basins, vanity units, showers and storage solutions using a simple printable guide before purchasing fixtures for your bathroom.

1. TOILETS: SHORT-PROJECTION & WALL-HUNG OPTIONS

Wall-Hung / Concealed Cistern

Elevates the bowl off the floor, revealing continuous floor tiles which visually expands room proportions. Requires a concealed wall frame.

Short-Projection Close-Coupled

Reduces total depth projection down to 600mm–620mm (vs standard 700mm+), saving precious walkway clearance without structural wall changes.

Buying Tip: Measure door swing clearances! A short-projection toilet prevents bathroom doors from hitting the bowl edge.

2. BASINS & VANITY UNITS: WALL-MOUNTED VS COMPACT FLOOR-STANDING

Wall-Mounted Slim Vanity

Combines integrated washbasin with deep drawer storage while leaving open floor space underneath for a lighter visual footprint.

Corner & Countertop Basins

Corner basins utilize awkward dead zones. Countertop vessels mounted on narrow-depth shelves offer boutique styling in tight cloakrooms.

Buying Tip: Choose single-lever tall mixer taps or wall-mounted brassware to keep basin depth as shallow as possible.

3. SHOWERS & ENCLOSURES: WALK-INS & SLIDING SCREEN SYSTEMS

Frameless Glass Wet Room Screen

Eliminates bulky metal frames and shower trays. Single glass panels allow light to flow uninterrupted across the entire room.

Bifold / Sliding Door Cubicle

Sliding or inward-folding doors eliminate outward door clearance issues in tight rectangular layouts where walk-ins aren't viable.

Buying Tip: Pair clear toughened glass with low-profile (25mm) shower trays or wet-deck tanking systems.

4. SMART STORAGE & HEATING SOLUTIONS

Recessed Mirrored Cabinets & Niches

Build storage into the stud wall cavity above basins or inside shower enclosures to eliminate protruding wall furniture.

Tall Slim Radiators & Underfloor Heating

Vertical heated towel rails maximize wall height. Electric underfloor heating mats remove the need for bulky floor radiators entirely.

Fixture Type	Best Compact Option	Key Size Spec	Primary Space Benefit
WC Suite	Wall-Hung or Short-Projection	< 620mm Depth	Increases floor area view
Basin Unit	Wall-Mounted Drawer Vanity	350mm–420mm Depth	Hides clutter, leaves floor clear
Shower Enclosure	Sliding Door or Walk-In Screen	800x800mm Min.	No outward door swing needed
Storage & Heating	Recessed Cabinet + Underfloor Heat	Flush Wall Mounting	Eliminates wall protrusion
