CG BATHROOMS LIMITED

YOUR NEW BATHROOM CARE AND MAINTENANCE PLANNER

A simple routine to help keep your bathroom clean, working well and easier to monitor for early signs of wear.

After each use / weekly

■	Wipe down wet surfaces and remove standing water where practical.
■	Clean shower screens with a suitable non-abrasive bathroom cleaner; follow the screen manufacturer's care advice.
■	Rinse away soap residue from tiles, trays, taps and fittings.
■	Keep the shower drain clear of hair and visible debris.
■	Run the extractor fan during and after bathing as recommended for the fan and room.

Monthly checks

■	Inspect visible silicone sealant around the bath, shower tray, basin and other joints for gaps, peeling or mould.
■	Check grout lines for cracks, missing sections or persistent discolouration.
■	Look around taps, pipe connections, toilets and visible plumbing for drips or damp patches.
■	Check the extractor fan grille for dust and clean it safely according to the manufacturer's instructions.
■	Look for recurring condensation, musty smells or signs of poor airflow.

Every 3–6 months

■	Check shower screens, hinges, seals and door runners for build-up or wear.
■	Inspect accessible areas around the bath panel, vanity unit and toilet for swelling, staining or moisture.
■	Check that wastes and traps drain freely; use suitable cleaning methods and avoid incompatible chemicals.
■	Review any recurring mould or condensation and address the underlying ventilation or moisture issue.

Every 6–12 months

■	Review the condition of sealant and grout more closely; arrange repair if joints have failed.
■	Check visible flexible hoses, isolation valves and accessible pipework for signs of wear or leakage.
■	Check extractor fan operation and clean or service it as the manufacturer recommends.
■	Review any maintenance instructions and warranty conditions supplied with fixtures and fittings.

Your maintenance record

Date	Area / item checked	Action taken / notes	Next check

Signs that need attention

Act promptly if you notice persistent damp patches, unexplained water stains, soft or swollen surfaces, loose tiles, recurring mould, damaged sealant, dripping pipework or a musty smell. Stop using the affected shower or fitting if continued use could worsen a leak. Contact a suitably qualified plumber or bathroom professional to investigate.

Important care notes

Always follow the care instructions for your specific tiles, grout, sealant, shower screen, taps, fan and other products. Avoid abrasive pads and harsh or acidic cleaners unless the manufacturer confirms they are suitable. Inspection intervals above are a general reminder schedule, not a substitute for product-specific guidance or professional inspection.
